se'lux®

COMPANY

Semperlux offers a wide range of **high-quality luminaires**. We provide **innovative ideas** to support **architects** and **planners** in their creative design of both **living** and **workspaces**.

Following this philosophy, the company has developed to become one of the leading manufacturers of interior and exterior luminaires.

While the interior range (our business sector 'INTERIOR') is based on a system of high-quality architectural lighting systems for fluorescent lamps, the design-oriented range of exterior lighting luminaires (our 'EXTERIOR' business sector) is primarily aimed at the public lighting of streets and squares.

The "Corporate Lighting" business sector provides support for the company's formal image, using the medium of light as an integral part of our Corporate Design concept. We offer our clients tailor-made services from planning and design through implementation, to documentation and maintenance.

se'lux

Light. Ideas. Systems.

In a world of declining values and mass production, quality and design have become decisive factors. We associate our name and the design of our products to an image combining the highest quality with sophisticated design.

The products we offer are of lasting value and our luminaires are designed to speak directly to those who witness them, evoking a sense of pleasure and communicating positive impressions and quality of life. In everything we do, customer satisfaction is the guiding principle of our philosophy.

Executive board
Berlin, in April 2010

FACTS & FIGURES

During the fiscal year 2009, we were affected by the economic crisis to varying degrees of severity in individual countries. Overall we achieved a total operating performance of 73.3 million euros with 497 staff members, a number which remained virtually unchanged throughout the year. Pre-tax profits amounted to 2.18 million euros. Being well endowed with liquid assets together with our high equity base provide us with a solid foundation for the challenges of the current fiscal year, 2010.

We approach the year with confidence and in particular see chances in the continuation of what for us have become key trends (improved energy efficiency, increased market demand for sustainable products and technologies and heightened requirements for modernising outdated lighting systems). The weak financial situation in which the public authorities find themselves and the generally weak situation for funding of new projects are also risks that will count against a fast recovery of the market however. We view the technological challenges related to the rise in demand for LED products positively, despite their necessitating a significant increase in R&D expenditure.

Our wide range of services, innovative new products and international focus (77 % foreign business) will help us to finish the present fiscal year successfully.
